DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-11, 13-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Xiang (US patent 5959431).

Claims 1, 2, Xiang teaches an apparatus/method for operating an electric motor comprising applying a train of pulses to motor 118 using a PWM controller 116, keeping the speed constant (see column 6 lines 6-14), and modulating the frequency of the pulses (see column 3 lines 42-46).

Claims 3-5, 13, 15-17, Xiang describes modulating the frequency from 2.5 KHz to 15 KHz.

Claim 6, Xiang describes that the invention is used in a vehicle such as a crane.

Claims 7-11, Xiang describes applying a PWM signal to a motor 118 with a substantially constant duty cycle and varying the harmonic content of the power applied to the motor, see column 3 lines 39-51.

Claims 18-21 Xiang describes a motor controller and method for controlling said motor comprising a motor 118, a PWM controller 116, wherein the controller 116 applies pulses to the motor with a constant speed and variable frequency.

Application/Control Number: 10/675,372 Page 3

Art Unit: 2837

Claims 14, 22, and 23, Xiang describes that particular frequencies cause instability (vibration/noise).

Claim Objections

- 3. Claim 12 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- The prior art made of record and not relied upon is considered pertinent to 4. applicant's disclosure. The documents cited in form PTO-892 describe other systems for controlling an electric motor using a pulse width/frequency modulator in order to decrease noise/instability in the motor system.
- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rina I. Duda whose telephone number is 571-272-2062.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Martin can be reached on 571-272-2107. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should PRIMARY EXAMINES you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
